

Project Title:

Outside the Box Office

Elevator Pitch

Outside the Box Office is the online destination for people looking to find rare and hard to find classic movie titles, information and trivia. If you want to have that piece of cinema history direct to your inbox , then you need to look **Outside the Box Office.**

DESCRIPTION

Outside the Box Office will be the online destination for classic film buffs, with blogs, trivia, quizzes, quotes, memorabilia, classic film information and film purchase ability.

MOTIVATION FOR DEVELOPMENT

Outside the Box Office was conceived from this developer's frustration to find one website destination that behaves like 'compare the market' for classic film purchases and fan hubbing.

USER STORY

AS A classic movie buff

I WANT a website that combines searches across multiple third-party classic movie platforms and databases

SO THAT I can access information about old films and compare classic movie products and prices in one online location.

Process

TECHNOLOGIES U

- HTML
 - CSS
 - Bootstrap
 - Javascript
 - Github
 - VS Code
 - Google font API
 - React
 - Babel
 - API - the movie database (TMDB) themoviedb.org

BREAKDOWN OF TASKS AND ROLES

All project tasks and roles developed and produced by Andrea Bell
<https://www.linkedin.com/in/andreajoanbell/>

Process

CHALLENGES

- Time and skill constraints and limitations
- Finding an API that covers all online stores DOES NOT exist so had to slightly change direction of project for this submission
- Originally used OMDB API however its classic movie database was not sufficient so had to change to TMBD (The Movie Data Base) API late in the project
- Developer's aptitude mainly in front end so was struggling to deliver on all tech requirements. Had the front end product been at this point a week ago I most likely would have been able to meet all back end requirements. Very Disappointed.

SUCCESES

- TMBD (The Movie Data Base) API has deep classic movie database and tagging and options to filter and group collections as desired and will be able to continue to work with this API beyond this course
- happy with how far I have taken this project as a starting point and am confident will be able to develop further and monetise this product beyond this course

DEMONSTRATION

It is planned to grow **Outside the Box Office** into the online destination for all things classic movie.

- including third party online store APIs for searching for purchase
- affiliated marketing for revenue
- blog section for articles
- trivia section
- movie quotes
- quiz section
- movie memorabilia shop
- silver screen actor and actress bios
- social media channels
- display advertising spots
- subscriber eNews
- secure login and log out cart for purchases
- sell scores and soundtracks from classic movies
- CSS styling and colour palette review
